Avanan Cloud Security
for EDU

AVANAN

Protect Students, Faculty, and Reputation from Phishing and Malware.

Students are a highly-vulnerable population for hackers. Avanan helps to protect both them and the institution from the costly ramifications of a breach.

Faculty have enough work with classes and research. Passive, pre-inbox protection from Avanan means they don't even see phishing emails. At the same time, they can easily report attacks that get through to IT, who can use the Search & Destroy™ post-delivery forensic tools to pull all malicious files from the entire collaboration environment in a few clicks.

Reputation is the basis of trust in the educational system. Avanan helps to prevent data leakage, account takeover, and compromises that extend across file-sharing, email, and collaboration with a one-click installation that is easy on staff and budget.

> *"Web Application Attacks accounted for roughly one-quarter of breaches in the Education vertical," which are mostly due to the "frequent compromise of cloud-based mail services via phishing links to phony login pages."*
>
> — *2019 Verizon Data Breach Investigation Report*

Instant One-Click Deployment
Avanan connects to both Office 365 and G Suite using an encrypted API protocol. Every Avanan client has a highly-secure, dedicated environment. At the same time, the Avanan security layer is additive to default security measures, and invisible to hackers — preventing them from custom-crafting attacks for specific institutions.

Multi-Tenancy Support
Many schools and universities have separate tenants: one for faculty, and another for staff. The Avanan dashboard unifies reporting, remediation, and policy enforcement in a single pane of glass. Security Operations and IT teams can manage and secure all environments with one threat interface.

Free One-On-One Customer Support
Learning shouldn't be disrupted by phishing attacks and the excessive clean-up time that follows. Get on a call with an expert to better understand how the Avanan portal can save you time, resources, and frustration.

AVANAN
Secure Your Domain

Hacking a domain with a strong reputation makes malicious actors happy. It helps them more easily launch future attacks. This makes Universities and other educational institutions high-value targets.

The Avanan platform currently protects faculty, student, and alumni populations at some of the largest university systems as well as local school districts.
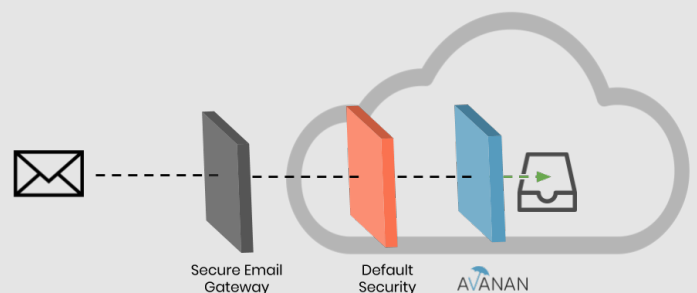

Full-Suite Protection

Manage data leakage, malware, and account takeover via a single threat intelligence interface. Robust protections extend to file-sharing and chat.

Patented technology built specifically for the cloud

Avanan connects to your environment via API and scans for threats after your existing security — but before the inbox. It is laser-focused on advanced attacks while also filtering out spam and greymail.

Secure Email Gateway

Default Security

AVANAN

"We really needed a better solution that could be preemptive and proactive to phishing and malware attacks, versus us going in on the backend trying to clean up after the fact."

Chad Marlow, Director of Operational Technology
Bethel School District
